Preface xiii

Contents xv

Chapter 1. Fractal approaches to biology and geosciences

Fractal landscapes in biological systems: Long-range correlations in DNA and interbeat heart intervals
H.E. Stanley, S.V. Buldyrev, A.L. Goldberger, J.M. Hausdorff, S. Havlin, J. Mietus, C.-K. Peng, F. Sciortino and M. Simons 1

Three-dimensional image analysis and fractal characterization of kidney arterial vessels
M. Sernetz, J. Wübbeke and P. Wlczek 13

Active walker models: tracks and landscapes
D.R. Kayser, L.K. Aberle, R.D. Pochy and L. Lam 17

Fractal landscape analysis of DNA walks
C.-K. Peng, S.V. Buldyrev, A.L. Goldberger, S. Havlin, F. Sciortino, M. Simons and H.E. Stanley 25

Self-affine fractal growth front of *Aspergillus oryzae*
S. Matsuura and S. Miyazima 30

Percolation model of the fixation of a mutant in a population
T. Ishinabe 35

Self-organized criticality in non-conservative models
P. Bak 41

Self-organized criticality in a forest-fire model
B. Drossel and F. Schwabl 47

Quaternary climatic fluctuations as a consequence of self-organized criticality
B. Grieger 51

Relation between the earthquake statistics and fault patterns, and fractals and percolation
M. Sahimi, M.C. Robertson and C.G. Sammis 57

Phase transitions in a spring–block model of earthquakes
G.L. Vasconcelos, M. de Sousa Vieira and S.R. Nagel 69

Some speculations on fractals and railway networks
L. Benguigui 75

The fractal appearance of interstellar clouds
T. Zimmermann and J. Stutzki 79

Fractals in physics: applications and theoretical developments
L. Pietronero 85

Chapter 2. Growth phenomena, reactions, nucleation and fracture

Plane DLA is not self-similar; is it a fractal that becomes increasingly compact as it grows?
B.B. Mandelbrot 95

Growth-zone scaling properties and fjord structure of aggregates grown by particle–cluster interaction
W. von Bloh, A. Block and H.J. Schellnhuber 108

Fractal dimensions of zero-noise diffusion-limited aggregation
M.T. Batchelor and B.I. Henry 113

Multifractal scaling of 3D diffusion-limited aggregation
S. Schwarzer, S. Havlin and H.E. Stanley 117

On the fractal characteristics of the η model
A. Sánchez, F. Guinea, E. Louis and V. Hakim 123

Asymptotic screening in the scale invariant growth rules for Laplacian fractals
A. Vespignani, R. Cafiero and L. Pietronero 128

Eden growth on fractal media
R. Paredes V. and M. Octavio 134

A model for spiral growth of a new phase in a Langmuir monolayer
S.A. Pikin 139

Diffusion-controlled reaction, $A + B \rightarrow C$, with initially separated reactants
S. Havlin, M. Araujo, H. Larralde, H.E. Stanley and P. Trunfio 143

Reactions at the gas-phase–porous-solid interface: Mechanisms and effects of surface geometry around room temperature
J. Samuel, M. Ottolenghi and D. Avnir 153

Reaction front dynamics of $A + B \rightarrow C$ with initially separated reactants
M. Araujo, H. Larralde, S. Havlin and H.E. Stanley 168

Self-organization in the $A + B \rightarrow 0$ reaction of charged particles
V. Kuzovkov and E. Kotomin 172

Diffusion-controlled reactions in nonstoichiometrical layered systems
I.M. Sokolov and A. Blumen 177

A new model for the hydrogen dimerization in α-SiO_2
L. Verdi and A. Miotello 182

Scaling properties of molecular spectra
E. Shalev, J. Klafter, D.F. Plusquellic and D.W. Pratt 186

Towards universality in the computer simulations of reaction limited colloid aggregation
A.E. González 190

Geometry and dynamics of randomly connected fractal clusters
Z. Alexandrowicz and D. Stauffer 195

Correlations and fractality in random Ising magnets
U. Nowak and K.D. Usadel 203

Fractal fracture
J. Kertész 208

Chapter 3. Interfaces, porous media and percolation

Fractal aspects of the Swiss landscape
G. Dietler and Y.-C. Zhang 213

Anomalous interface roughening in 3D porous media: experiment and model
S.V. Buldyrev, A.-L. Barabási, S. Havlin, J. Kertész, H.E. Stanley and H.S. Xenias 220

Gradient stabilized and destabilized invasion percolation
P. Meakin, A. Birovljev, V. Frette, J. Feder and T. Jøssang 227

Monte Carlo simulation of surface structures during oxide reduction
P. Tigelmann and M. Martin 240

Saturation coverage in random sequential adsorption of very elongated particles
P. Viot, G. Tarjus, S.M. Ricci and J. Talbot 248

Tracing interfaces in porous media
R. Rangel 253

A new approach to the determination of the surface fractal dimension of porous solids
A. Neimark 258

Simulation of granular media
H.J. Herrmann 263

Generalized Archie law – application to petroleum reservoirs
C. Tsallis, E.M.F. Curado, M.S. de Souza, V.L. Elias, C. Bettini, M.S. Scuta and R. Beer 277

Multifractal characterization of petrophysical data
J. Muller 284

Scaling of the effective permeability in multifractal porous media
A. Saucier 289

Self-similarity law of particle size distribution and energy law in size reduction of solids
M. Ochiai, R. Ozao, Y. Yamazaki and A. Holz 295

Anti-red bonds distribution law in 3D percolation
J.-F. Gouyet 301

Self-avoiding walk on critical percolation cluster
H. Nakanishi and J. Moon 309

Critical exponents of continuum percolation
K. Maruyama, K. Okumura and S. Miyazima 313

Is the second transition in the hierarchical spin ordering of a heterogeneous magnet $CoCl_2$–GIC of a percolation type?
M. Matsuura, Y. Murakami and M. Hagiwara 316

Chapter 4. Vibrational and transport properties of disordered systems

Fractal drums and phonons in binary glasses
B. Sapoval 321

Thermal transport in fractal systems
J.K. Kjems 328

Reminiscence of the Van Hove singularity in the specific heat of disordered systems
S. Russ 335

Light scattering in disordered solids
A. Fontana 339

The fluctuation origin of disorder-induced light scattering
M. Montagna, P. Benassi, W. Frizzera, O. Pilla, G. Viliani, V. Mazzacurati, G. Ruocco and G. Signorelli 348

Scattering and localization of light on fractals
V.M. Shalaev, M. Moskovits, A.A. Golubentsev and S. John 352

Vibrational, reorientational and translational ionic motion in glass
C. Cramer, K. Funke, C. Vortkamp-Rückert and A.J. Dianoux 358

Multifractal localization
A. Aharony and A.B. Harris 365

Multifractality of random walks and localized excitations on linear random fractals
H.E. Roman 379

Dynamics of random fractals: large-scale simulations
T. Nakayama 386

Multifractality of wave functions and wave packets at the metal–insulator transition in the Anderson model of localization
H. Grussbach and M. Schreiber 394

Multifractal analysis of disorder induced metal–insulator transitions
U. Fastenrath, M. Janßen and W. Pook 401

Multifractal behavior and scaling in disordered mesoscopic QHE-systems
B. Huckestein and L. Schweitzer 406

Limit distributions in random resistor networks
R.F. Angulo and E. Medina 410

Anomalous ion transport in glasses
A. Bunde and P. Maass 415

Lattice-gas models of dispersive transport in disordered materials
D. Knödler and W. Dieterich 426

NMR relaxation in disordered systems
A. Bunde, P. Maass and M. Meyer 433

A Monte Carlo study of subdiffusive displacements of interacting particles in a percolating system
R.B. Pandey 438

On relaxation in disordered materials
M. Massalska-Arodź 442

Enhanced fluctuations in driven lattice gases
G. Szabó, A. Szolnoki, Z. Juhász and G. Ódor 445

Fractional diffusion equation and relaxation in complex viscoelastic materials
M. Giona, S. Cerbelli and H.E. Roman 449

Electron diffusion in percolating gold clusters
A. Carl, G. Dumpich and S. Friedrichowski 454

Thermal vortices in superconducting fractals
R. Meyer, C. Nussbaum, J.L. Gavilano, B. Jeanneret, C. Leemann and P. Martinoli 458

Algebraic decay of fluxoid-dynamics in the BSCCO high-T_c superconductor
R. Behr, J. Kötzler, A. Spirgatis and M. Ziese 464

High field magneto-transport in a Sierpiński gasket fractal
D.J. Bergman and A.K. Sarychev 470

Series expansion for a weakly nonlinear conductivity of random composites
O. Levy and D.J. Bergman 475

Chapter 5. Mathematical aspects of fractals and chaos

Some recent variations on the expected number of distinct sites visited by an n-step random walk
G.H. Weiss, I. Dayan, S. Havlin, J.E. Kiefer, H. Larralde, H.E. Stanley and P. Trunfio 479

Fractional differentiation of devil's staircases
H.J. Schellnhuber and A. Seyler 491

Fractal path integrals with applications to quantum many-body systems
M. Suzuki 501

Loop-erased self-avoiding walks in two dimensions: exact critical exponents and winding numbers
B. Duplantier 516

Fractal phase space transport dynamics and relaxations in complex correlated systems
K.L. Ngai, S.L. Peng and K.Y. Tsang 523

Projections of multifractal measures
G. Radons 532

Self-similar drums and generalized Weierstrass functions
J. Gerling and H.-J. Schmidt 536

Threshold lowering for subharmonic generation in Cantor-like composite structures
A. Alippi, G. Shkerdin, A. Bettucci, F. Craciun, E. Molinari and A. Petri 540

Scattering of light by two-dimensional deterministic Koch islands
A. Macke and F. Tzschichholz 545

Absence of spontaneous symmetry breaking on fractal lattices with $\tilde{d} \leqslant 2$
D. Cassi 549

Fractally shaped acceptance domains of quasiperiodic square–triangle tilings with dodecagonal symmetry
M. Baake, R. Klitzing and M. Schlottmann 554

Fractal dimensions of strange attractors obtained from the Taylor–Couette experiment
Th. Buzug, J. von Stamm and G. Pfister 559

Fractal structures of spheroidal chaotic attractors
M. Klein and G. Baier 564

A generic mechanism determining the fractality of basin boundary structures
J. Parisi, J. Peinke, A. Kittel, M. Klein and O.E. Rössler 571

List of contributors 576
